

RISCC

risk-based
screening for
**cervical
cancer**

Unbeliavable
that there is
a cancer
which can be
prevented!

Cervical cancer is caused by
Human Papillomavirus - HPV -
a very common infection.

4 out of 5 women will get the
infection during their lives.

Among infected women, only a
few women will develop cancer.

cervical cancer risk factors

Smoking

Oral contraceptive

Transplant, HIV infection

Autoimmune disease

primary
prevention:
HPV vaccine

secondary
prevention:
SCREENING(s)

← Cervical cancer can be prevented? →

How can be women even more protected?

RISK BASED SCREENING

It is not another screening type.

Researchers will analyse RISK DATA from studies, health records, published data, screening histories, vaccination status and other risk factors and provide personalised screening recommendation.

Electronic online platform will help.

Training program for health care professionals.
